How does land use influence bird community composition?

David J. Flaspohler, Colin C. Phifer, Jessie L. Knowlton, Christopher R. Webster
Results: Avian Community

- Avian Community Stress: 11.98, 85% of variation explained.

- Mean bird species richness per land use:
  - Mature eucalypt
  - Young eucalypt
  - Pasture/crops
  - Mixed-use
  - Native espinal

- Take Home:
  1. Eucalyptus is species depauperate compared to alternatives.
  2. Each assemblage is relatively unique.

- Species included:
  - Monk Parakeet
  - Roadsided Hawk
  - Dark-throated Seedeater
  - Yellow Cardina
  - Mixed-use
  - Mature eucalypt
  - Pasture/crops
  - Native espinal
